

Capability Statement

www.ppx-tec.com

PPXTEC, LLC has been in software research and development for 7 years in the business of creating innovative technology solutions for data literacy and usability. In the mobile marketplace, success means that a mobile application can deliver business value to its users. Usability means a product can be used by specific users to achieve specified goals with effectiveness, efficiency in a specified context of use. Interoperability is open communication channels between everyone involved in the patient's care. In health care, the space that defines success is far more complex. For a mHealth application to be seen as worthwhile, it must achieve at least one of the following tasks: improve patient outcomes and care coordination, ensure adequate privacy and security protections, engage patients and physicians or improve care efficiency and reduce healthcare costs. PPX's app was designed to address all of those tasks.

Core Competencies
